

Conventus

**Owner:**

Ciminelli Development

**Danforth's Role:**

Integrated Project Delivery Provider

**Contract Value:**

\$8,400,000

**Date Completed:**

March 2015

The Buffalo Niagara Medical Campus has expanded with the construction of Conventus. This facility, located in downtown Buffalo, will be home to medical offices and laboratory space.

Danforth's role in the project is to provide mechanical expertise for both the core and shell of the building. Our Team is in the process of installing closed circuit coolers, multiple boilers, heat pumps and custom air handling units. Aside from installation, Danforth assisted the engineer with the design of the mechanical systems and will provide balancing services as part of our Integrated Project Delivery Model.

This project has been challenging due to the mid-project addition of the 7th floor laboratory space. The expert coordination of the Project Team allowed Danforth to adapt to the new equipment requirements without major interruption.

Danforth is currently installing the duct work on the 7th floor. The project is 80% complete and is projected to conclude in early 2015.
